

AUTOLOGOUS BLOOD AND MARROW TRANSPLANTATION

Proceedings of the Tenth International Symposium

Edited by Karel Dicke & Armand Keating

"...conveys the cutting-edge excitement of the field and provides a very good indication of the direction or thrust of investigations." **Armand Keating, MD**

Featuring more than 80 articles in 700 pages written by leading researchers in the field, *Autologous Blood and Marrow Transplantation* includes cutting-edge information on the current state and future direction of hematology. Compiled from exciting new data in hematology research and practice, as presented at the Tenth International Symposium.

This collection encompasses presentations on randomized trials for leukemia, lymphoma and breast cancer, as well as newer strategies for autologous marrow and blood transplantation, such as mobilization of blood cells, posttransplantation immune modulation and eradication of residual disease.

Topics in this collection include:

- CML
- AML
- Myeloma
- Lymphoma
- Solid Tumors
- Breast Cancer
- And New Treatments
