

D I S C L A I M E R S A N D C O N D I T I O N S

All contributors should be aware of certain conditions and limitations to the Worldwide Web and The Heart Surgery Forum® (the HSF), as follows:

1. The purpose of the HSF is to exchange information. Accuracy of the content, methodology, and all other aspects of a contribution to the HSF are considered to be the sole responsibility of the author(s).

2. The HSF is a medical information site and scientific journal available to professionals and the lay public alike. There is no restriction on access to the information posted on the HSF Website. The information, whether it be an article, editorial, photograph, drawing or discussion, is to be considered an opinion of the authors, not the HSF itself. Ideas and data expressed in the HSF are not to be considered treatment recommendations or obligations. The HSF and its staff, including the members of the Editorial Board, will not be responsible for any damages, punitive or otherwise, that occur as a result of harm to any patient receiving a treatment discussed or presented on the HSF Website, the OpenHeart-L or other listservs or any other multimedia provided by the HSF. All patients and family members are cautioned to seek the advice of their treating physician(s) and make treatment decisions only after discussing the various treatment options and potential outcomes with their doctors.

3. It is the author(s) responsibility to ensure that none of the contents of the manuscript are covered by an exclusive publication arrangement with another publishing firm, whether through print or electronic medium. Because the HSF requires that author(s) transfer exclusive publishing rights to the HSF, it is important that the HSF receive only material that has not previously been protected or covered by a publication agreement. It is entirely the responsibility of the primary author to ensure that the material submitted to the HSF does not violate any previous agreement. You must submit the appropriate Author Agreement and Copyright Transfer Statement signed by all co-authors for our files. The HSF will not be responsible for any infringement of such a prior agreement, nor for any damages, punitive or otherwise, due to failure or oversight by the author(s).

4. All graphic images and text submitted to the HSF Website are available to the public worldwide. Thus, all authors must be aware that the images on the HSF Website can be saved to disk or printed by anyone receiving the data from the HSF server. The HSF is not responsible for how users or readers of this service subsequently use the data, text, or graphic images that are sent for posting on the Website.

5. In the event that the author(s) want to publish the same or similar data in a paper journal in the future, the HSF requests that the author first receive written permission from the HSF. Once permission has been given, the following citation must be included at the end of the Discussion or Conclusion section of that published article using the following syntax:

Portions reprinted with permission from The Heart Surgery Forum manuscript #; vol (issue): pages, year.

6. Not all submissions are suitable in content and/or quality for posting. The HSF and/or its staff, including the Editors, reserve the right to deny posting of any manuscript or message received by postal, email or other route.

7. Original manuscripts submitted to the HSF will be subject to Peer Review. This function will be provided by a volunteer panel of experts in cardiothoracic surgery. The Editorial Board will review new submissions, provide feedback (by email) to the authors and recommend acceptance, modification, or rejection. To review the structure and function of the Editorial Board, please review the Editorial Guidelines and Policies section in this issue.

8. The HSF reserves the right to insert comments, criticisms, or editorial critique into the "Review and Commentary" section of each manuscript. This is necessary to ensure discussion, analysis, and quality control in important postings. If there are concerns about methodology, feasibility, statistical analysis or other issues that might adversely affect the readers' objective understanding of the intended purpose of the article, the HSF staff, including the Editor, reserve the right to post their criticisms and analysis in the "Review and Commentary" section at the end of the article.

9. Do not include any patients' names on either the photographs or the body text. The HSF, where necessary, will remove all identification of individual patients and/or their names.

10. The HSF reserves the right to adjust contrast, color tone, sharpness and other photographic details in order to maximize the appearance of an image without prior approval of the author(s). Thus, the image might appear slightly different than the original photographs or video that you submit.

11. The author(s) accept full responsibility for including any or all trademark, copyright or other patented information symbols when referring to commercial entities. The HSF will not be responsible for any damages, punitive or otherwise, which result from such information that is missing from your submission.

12. Manuscripts are expected to contain some minor errors, typographical or otherwise. The HSF staff will try to screen and correct minor spelling, punctuation, grammatical, or other errors that will not affect content. The HSF staff and Editor(s) will not consult the author(s) for minor changes.

13. The HSF makes no warranty, express or implied, with respect to the material contained herein. The HSF publishes advertisements in this journal relying on the advertiser to comply with all legal requirements relating to the marketing and sale of products or services advertised. The HSF is not responsible for claims made in the advertisements published in the HSF Website, print journal, or CD-ROM. The appearance of advertisements in the HSF Website, print journal, or CD-ROM does not constitute endorsement, implied or intended, of the product advertised or the claims made for it by the the advertiser.
